

Easy iWeb Publisher Set-up

- Download, install, & launch **Easy iWeb Publisher** from <http://www.plyxim.com/>
- Click "Configuration" tab.
- Input the Following Info:
 - Upload iWeb site to: enter **mail.wap.org**
 - Web Site Username: enter **your WAP ID**
 - Web Site Password: enter **your WAP Password**
- Click "Check Configuration"
- Test button will turn green.

Transfer your Site to wap.org

- Click "Publish an iWeb Site"
- Bring Finder to Front
 - Locate your desktop folder (Recommend: "first.lastname")
 - Click and drag to the **Easy iWeb Publisher** target area. (Inside the red oval at left.)
- Click blue "Publish to Web" button at the bottom right.
- Status will change to: "Folder Upload Successful"

Your Web Site URL

- Start your preferred browser.
- Construct the URL of your web site:
 - The building blocks for your URL:
 - It begins with: <http://members.wap.org/first.lastname/>
 - Continues with: sitefoldername/
 - It ends with: index.html/
 - Put it together and the URL might look like this: <http://members.wap.org/travis.good/Route66/index.html/>
- Enter the URL into browser and hit return.
- When your site loads then the URL is correct.

Work Flow for Publishing

- Publish iWeb site to "first.lastname" folder.
- Launch Easy iWeb Publisher.
- Drag "first.lastname" folder to Easy iWeb.
- Click "Publish to Web" button.
- Build the URL for your site and test in Safari: <http://members.wap.org/first.lastname/sitefoldername/index.html>
- Email the URL to all your friends & family!

Tips to Remember

- Publish to a "first.lastname" folder on Desktop.
- Do not use spaces " " in your site names, your file names or your directory names.
- End your URL with the file name to launch, e.g. members.wap.org/first.lastname/sitefoldername/index.html
- Plan your storage so you don't get surprised.
